Connected home is expanding rapidly but consumers need help

TOP CONSUMER CONCERNS

- Smart home device setup complexity
- Setting up connectivity correctly and securely
- Interoperability with existing and new smart home devices
- Do not know what features and functions are available

Among U.S. broadband households:

26% own at least one device from a list of common smart home devices

46% own a connected health device

28% own a smart speaker with voice assistant, up from 3% in 2016

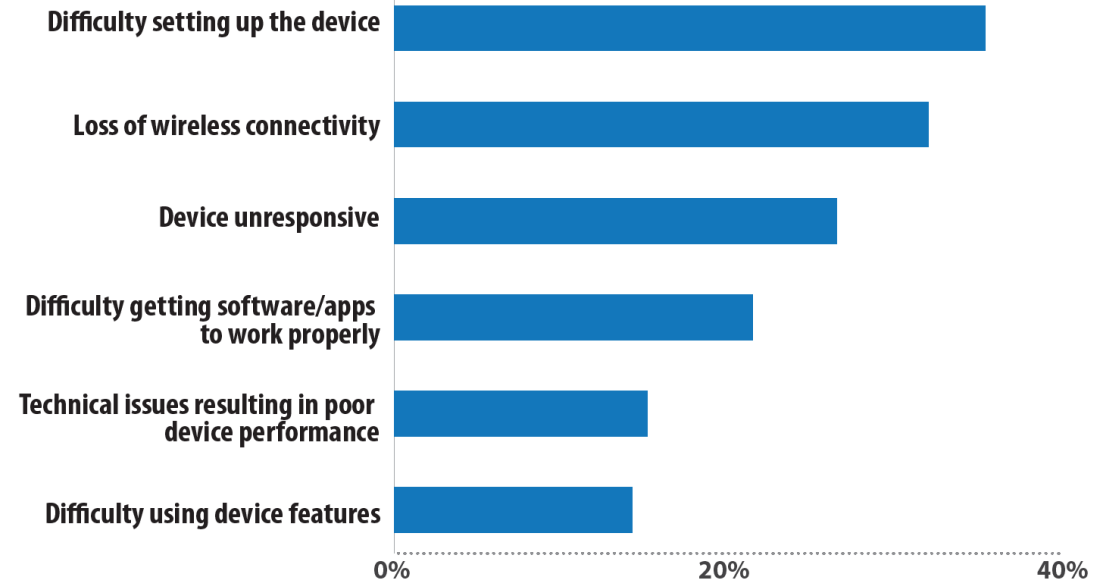

71% own a connected entertainment device

Smart Home Devices: Common Technical Problems

U.S. Broadband Households that Experienced Technical Problems with Smart Home Device

© Parks Associates

# Connected home is expanding rapidly; OEM must address user expectations

## CONNECTED PRODUCTS CREATE A LONGER TERM RELATIONSHIP BETWEEN OEM AND USERS

- Interactive user experience
- Readily available for help and guidance
- Easier to setup
- Easier to work with third-party devices
- Ability to monitor, maintain and fix device issues on an ongoing basis

### High Appeal of Smart Home Device Support Services

U.S. Broadband Households

---

# User problem

## Setting up new smart home device (or change setting of existing device)

- Consumer is facing a myriad of smart home devices that use many different connectivity and security technologies
- User should not deal with different configuration and pairing methods in various wireless technologies
- When a user cannot get through the smart home device setup easily, they will not use the devices to full potential, or they will not use the device at all

## Digital transformation of end user interaction

- With QuickSet Widget's built-in QuickSet capabilities and Virtual Agent, end users can focus on core product value and features provided by OEM.
- As a result, OEM brand engagement experience with users is greatly enhanced.

---

# OEM problem

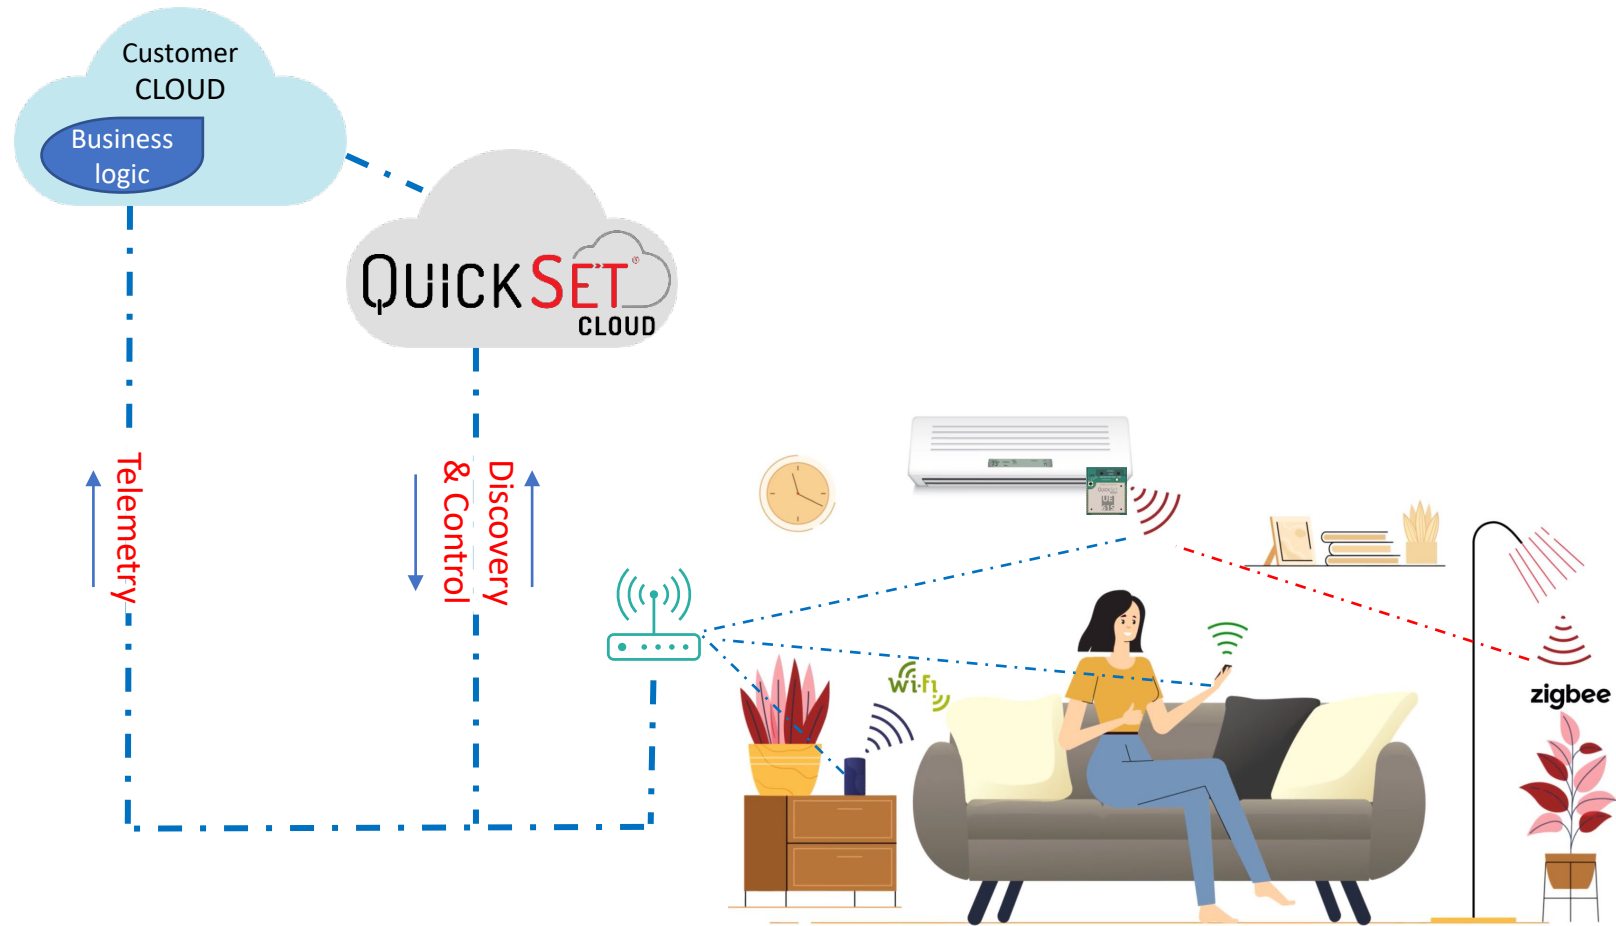

## Easier to set up new smart home device with QuickSet Widget (or change setting of existing device)

- Designed for digital transformation of end user interaction and brand engagement experience
- Integrating QuickSet Widget in OEM products helps OEM to focus resources on unique value and competencies while using built-in capabilities for connectivity, setup, interoperability, device maintenance and full lifecycle management

# Device maintenance and full lifecycle management

- With fully connected and managed QuickSet Widget, the OEM customer support team can easily view the status of their product, troubleshoot remotely and make use of the built-in capabilities to get notifications if the product needs servicing

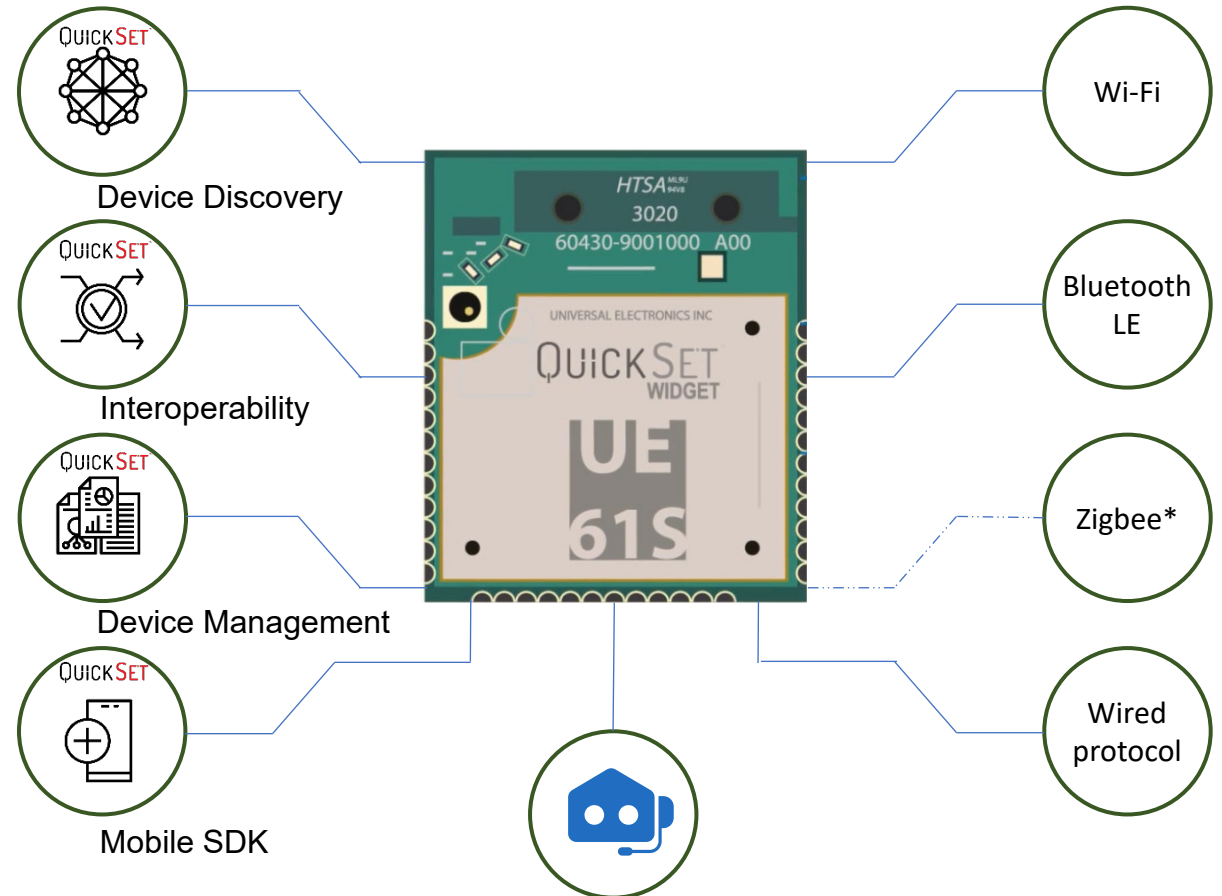

---

# Features

## QuickSet Widget Features

- QuickSet Widget is integrated with QuickSet Cloud device management services
- Offering a remote management dashboard and mobile software development kit to deliver turnkey capabilities for onboarding, interoperability, management and lifecycle support of connected home products
- QuickSet provides a scalable platform for simplifying onboarding and control across entertainment and smart home devices, already in use by many leading brands

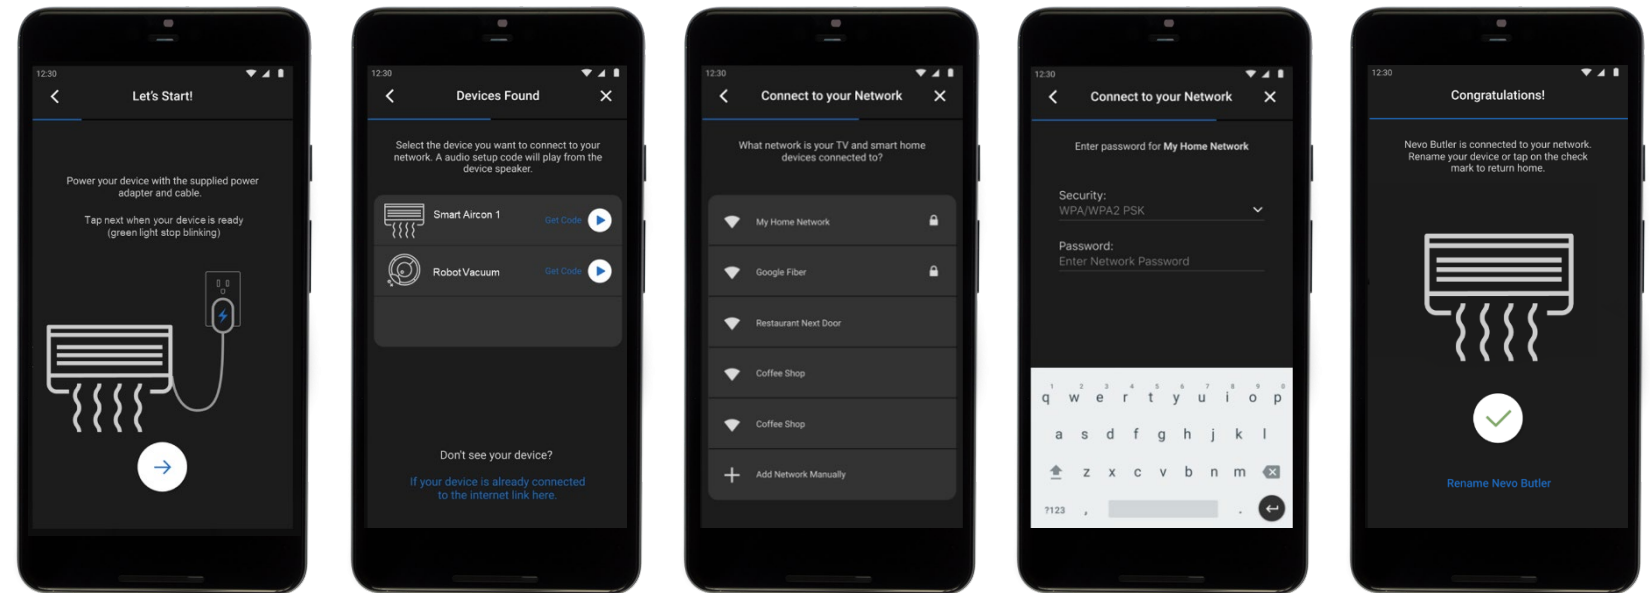

## QuickSet Widget Features and Benefits

- **Easy onboarding** for connection to WiFi network and IP/Zigbee based companion devices through mobile app with minimal steps
- Fully secured and managed product lifecycle through device management dashboard and remote access provide ongoing secure feature updates and remote troubleshooting to **reduce ongoing product lifecycle maintenance costs**
- Virtual Agent offers **self-help device for setup, discovery and troubleshooting** available on device or via mobile app or support website
- **Enable interoperability** with third-party devices/ecosystems that reduce friction by controlling and being controlled by third-party devices/ecosystems
- **Integration with existing customer cloud** back-end for business logic and telemetry data, as well as QuickSet Cloud device maintenance, product lifecycle management
- **Hardware Development Kit** makes it easy for OEMs and system integrators to start integration and development even before target board is available
- **Extensive connectivity capability** that includes WiFi, Bluetooth LE, IR, wired protocol, and extendable to Zigbee through UE878 module or multi-protocol SoC UE878; multi-RF platform is optimized to ensure best possible performance

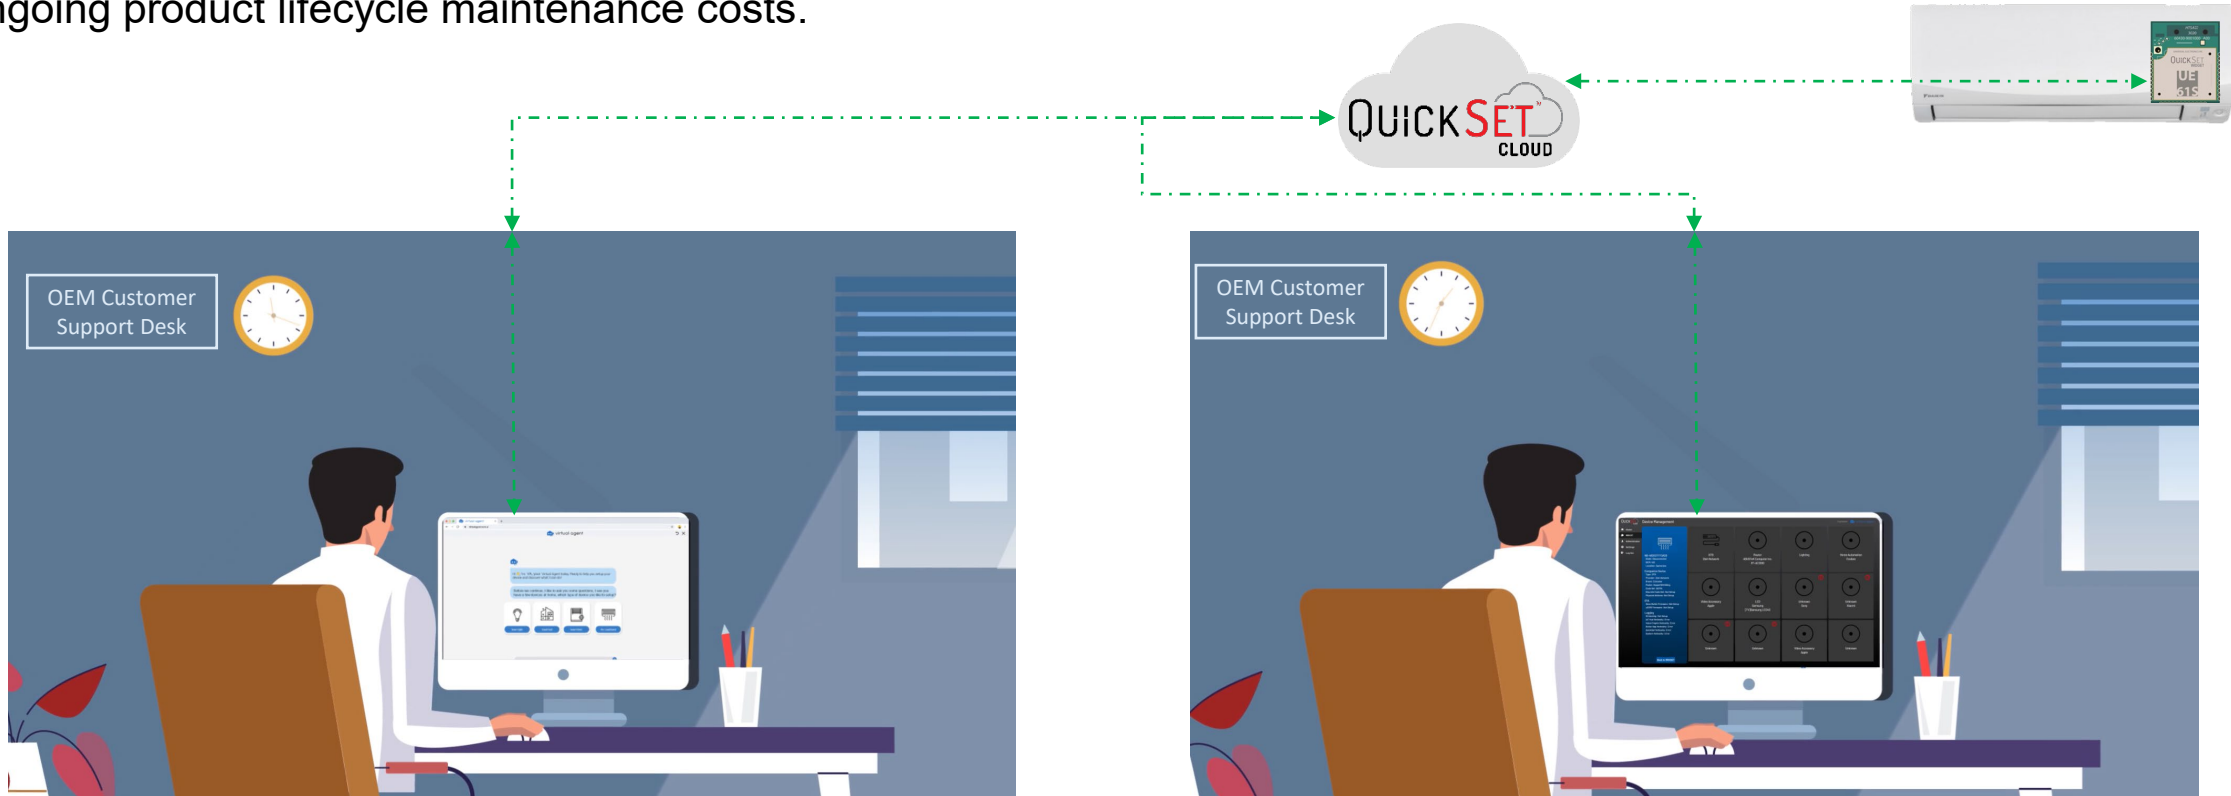

# Easy fuzz-free onboarding

For connection to WiFi network and IP/Zigbee based companion devices through mobile app with minimal steps and as simple as connecting a mobile phone to a WiFi network

# Secured and managed product lifecycle

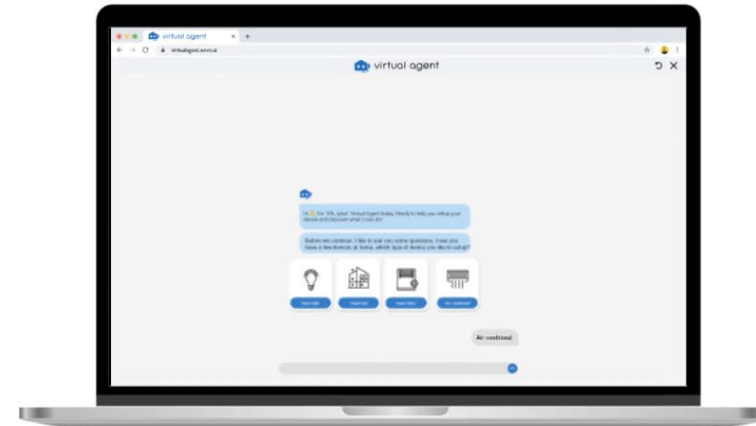

Device management dashboard and remote access provide ongoing secured end-to-end feature updates and remote issue troubleshooting throughout OEM product lifecycle, reducing ongoing product lifecycle maintenance costs.

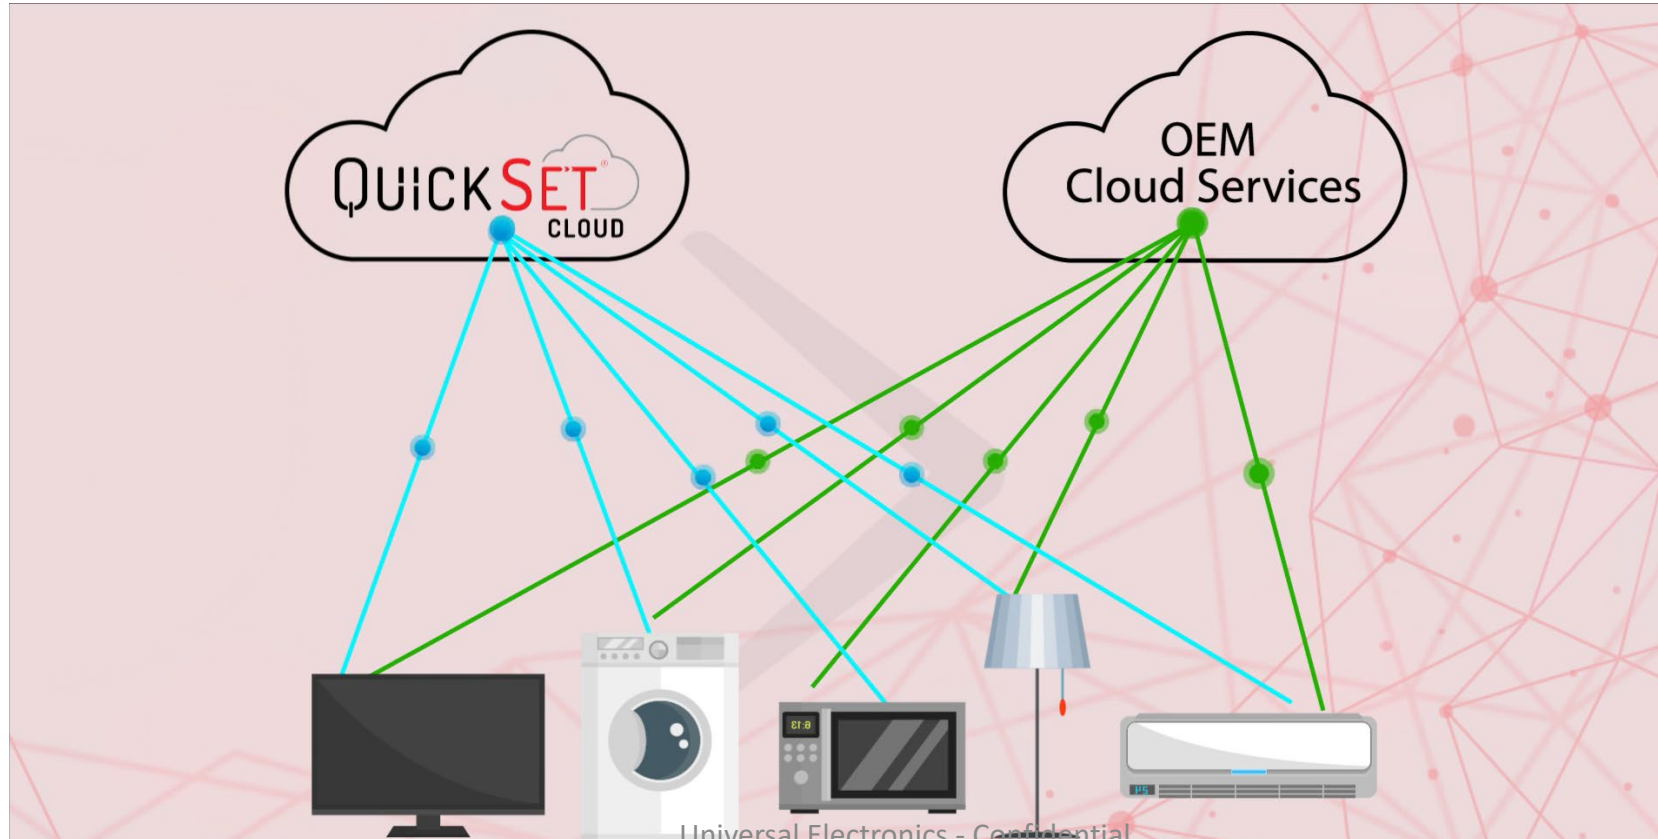

# Virtual Agent for user self-help

Virtual Agent offers enhanced user experience including IP device discovery and setup, product feature discovery and troubleshooting via integration on device or via mobile app or support website

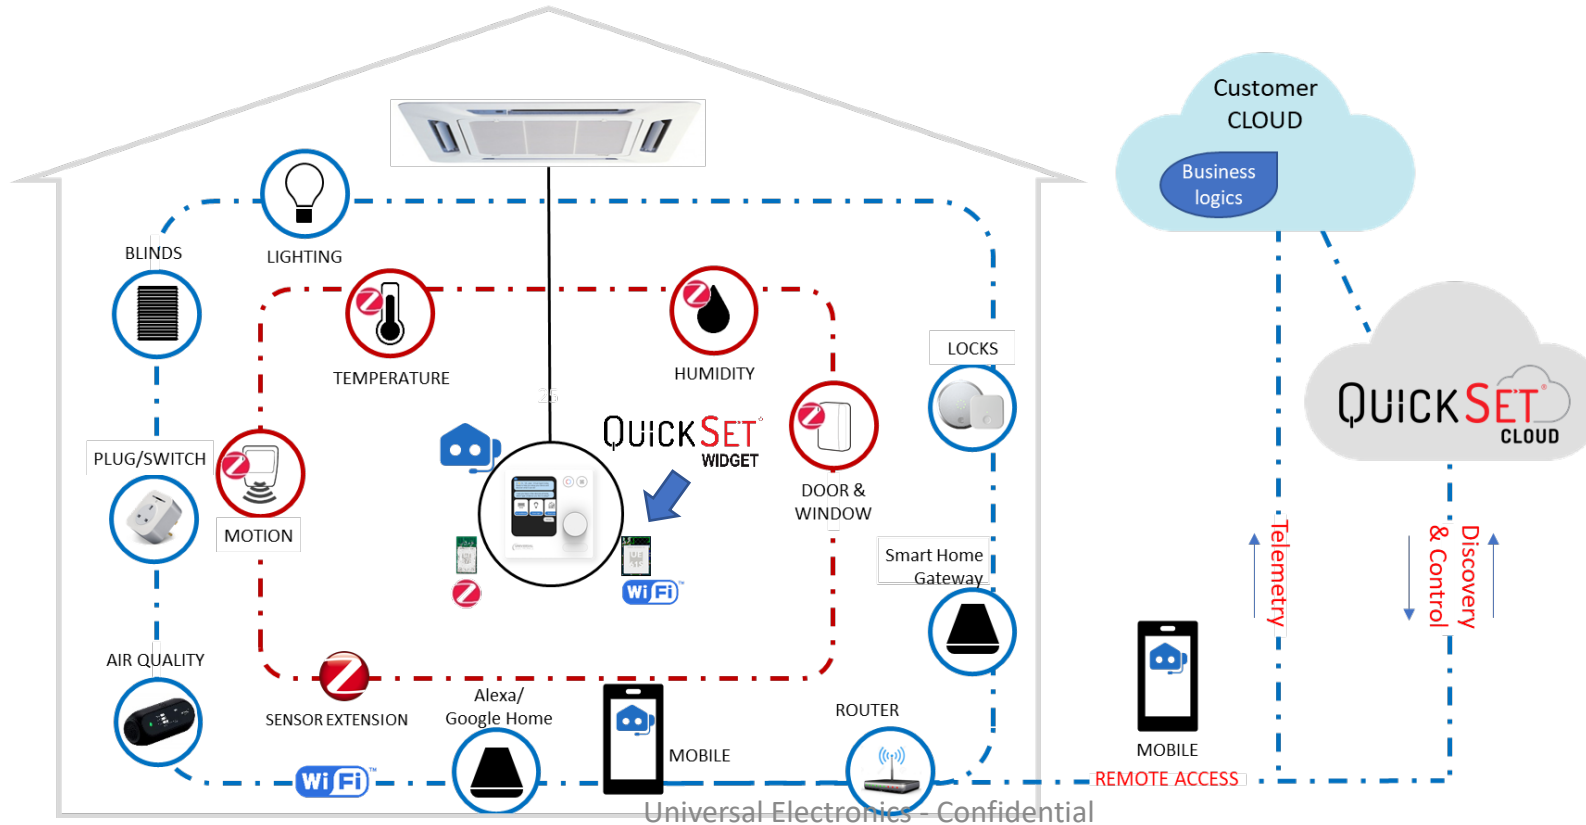

## Multi-cloud

Multi-cloud allows integration with existing customer cloud back-end for business logic and telemetry data, while connecting to QuickSet Cloud for device maintenance, product lifecycle management and interoperability services

# Interoperability as a service

Enable powerful interoperability with third-party devices and ecosystems in bare-metal, cost-effective modules that reduce friction by controlling and being controlled by third-party devices and ecosystems

# Hardware Development Kit (HDK)

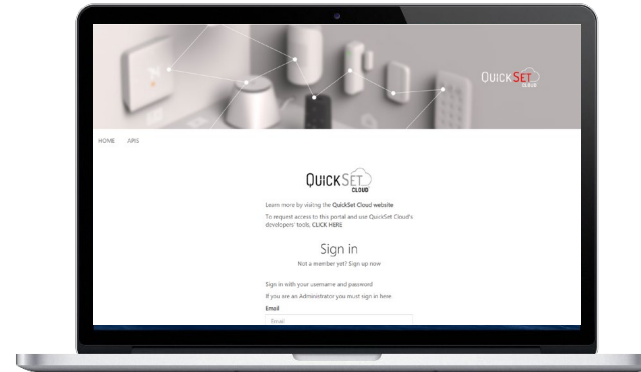

HDK allows for easy evaluation and quick prototyping, making it simpler for OEMs, builders and system integrators to start integration and development even before target board is available

Host adapter board for QuickSet Widget module and companion Zigbee module

Standard FTDI USB to UART cable (purchase by developer)

Developer registration at QuickSet Cloud portal

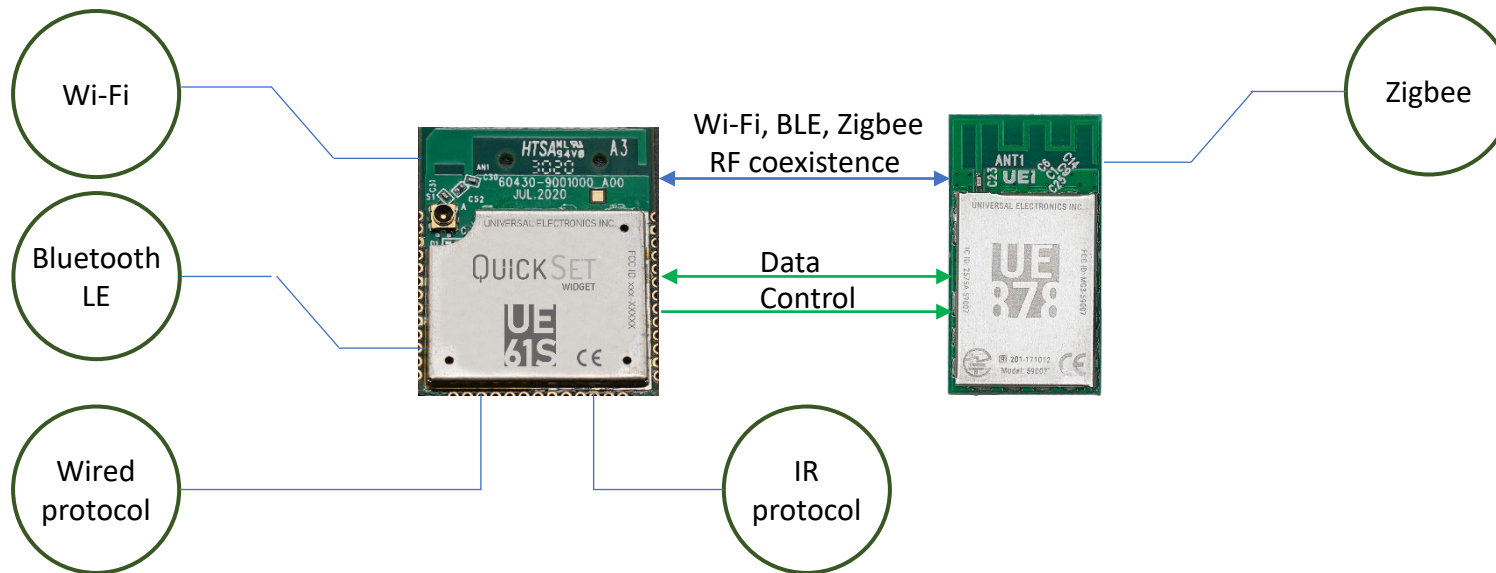

- Datasheet
- Application note
- Host app sample codes

Online documentation

# Extensive connectivity capability

Extensive connectivity capability that includes WiFi, Bluetooth LE, IR, Wired Protocol, extendable to Zigbee coordinator/router through companion UE878 Zigbee module or multi-protocol SoC UE878. The multi-RF platform is optimized with RF co-existence design to ensure best possible RF performance.

---

# Inside

QUICKSET<sup>®</sup>  
WIDGET

An off-the-shelf or turnkey **QuickSet Widget Module** with Virtual Agent and QuickSet pre-integrated, offered as managed hardware with **built-in security** from manufacturing throughout the lifecycle.

Optional Virtual Agent add-on that is built on top of QuickSet and driven by QuickSet Cloud underlying capabilities. Features are expandable through enterprise integration.

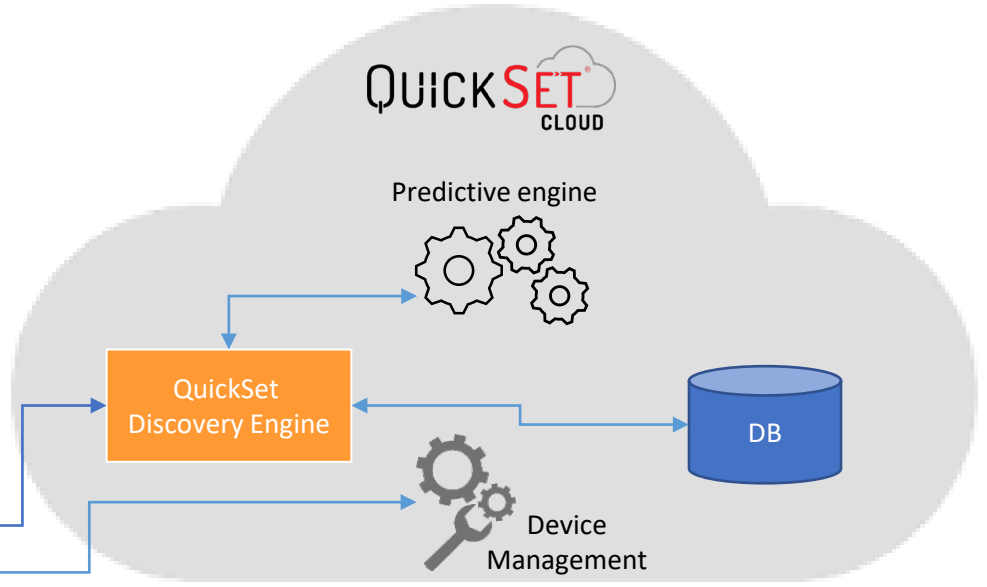

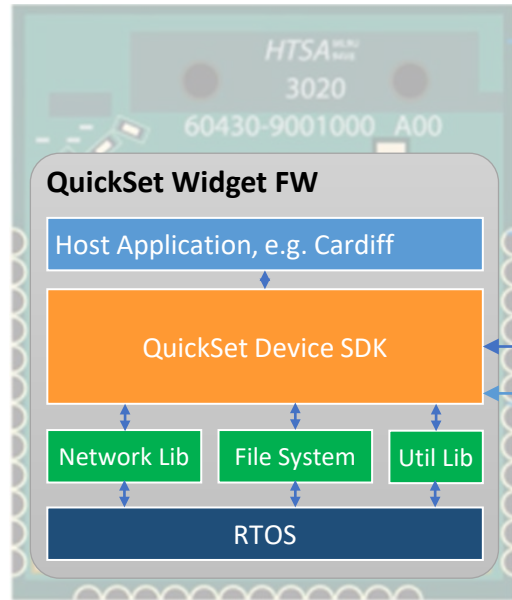

QUICKSET<sup>®</sup>  
CLOUD

An end-to-end platform for discovery, control and interaction with devices including rules and automation framework for a truly connected experience. Leveraging the largest knowledge graph of devices, services are offered through QuickSet Cloud and QuickSet SDK delivery methods with edge intelligence built in and cloud scalability capabilities.

# QuickSet Widget System Architecture

- Lighting
- Blinds
- HVAC
- Appliances
- AV devices
- And more....

# QuickSet Widget UE61V Module Specification

## Hardware Features

- Embedded WiFi4, BLE 5.0, optional companion Zigbee 3.0 module
- Advanced RF coexistence control for WiFi, BLE and Zigbee
- Advanced security and networking features, including SSL/TLS, IPv4/IPv6 networking, WPA/WPA2/WPA3, WPA-Enterprise, mDNS.
- 200MHz ARM Processor with DSP instruction
- Interface: UART, SPI, I2C, GPIO
- Display resolution up to 480 x 480, 16bits color per pixel
- Module dimension: 28mm x 35mm x 2.4mm

## Software Features

- Secure remote access, device discovery, Interoperability as a Service, Zigbee network management, management dashboard, etc.

## Works with QuickSet Cloud, nevo.ai platform for

- Secure, managed internet connection with backend server
- Secure, managed dashboard services
- Cloud-side device twin virtual device

# QuickSet Widget UE61S Module Specification

## Hardware Features

- Embedded WiFi4, BLE 5.0; optional companion Zigbee 3.0 module
- Advanced RF coexistence control for WiFi, BLE and Zigbee
- Advanced security and networking features, including SSL/TLS, IPv4/IPv6 networking, WPA/WPA2/WPA3, WPA-Enterprise, mDNS.
- 200MHz ARM Processor with DSP instruction
- Interface: UART, SPI, I2C, GPIO
- Module dimension: 21.5mm x 26mm x 2.4mm

## Software Features

- Secure remote access, device discovery, Interoperability as a Service, Zigbee network management, management dashboard, etc.

## Works with QuickSet Cloud, nevo.ai platform for

- Secure, managed internet connection with backend server
- Secure, managed dashboard services
- Cloud-side device twin virtual device

# Channels

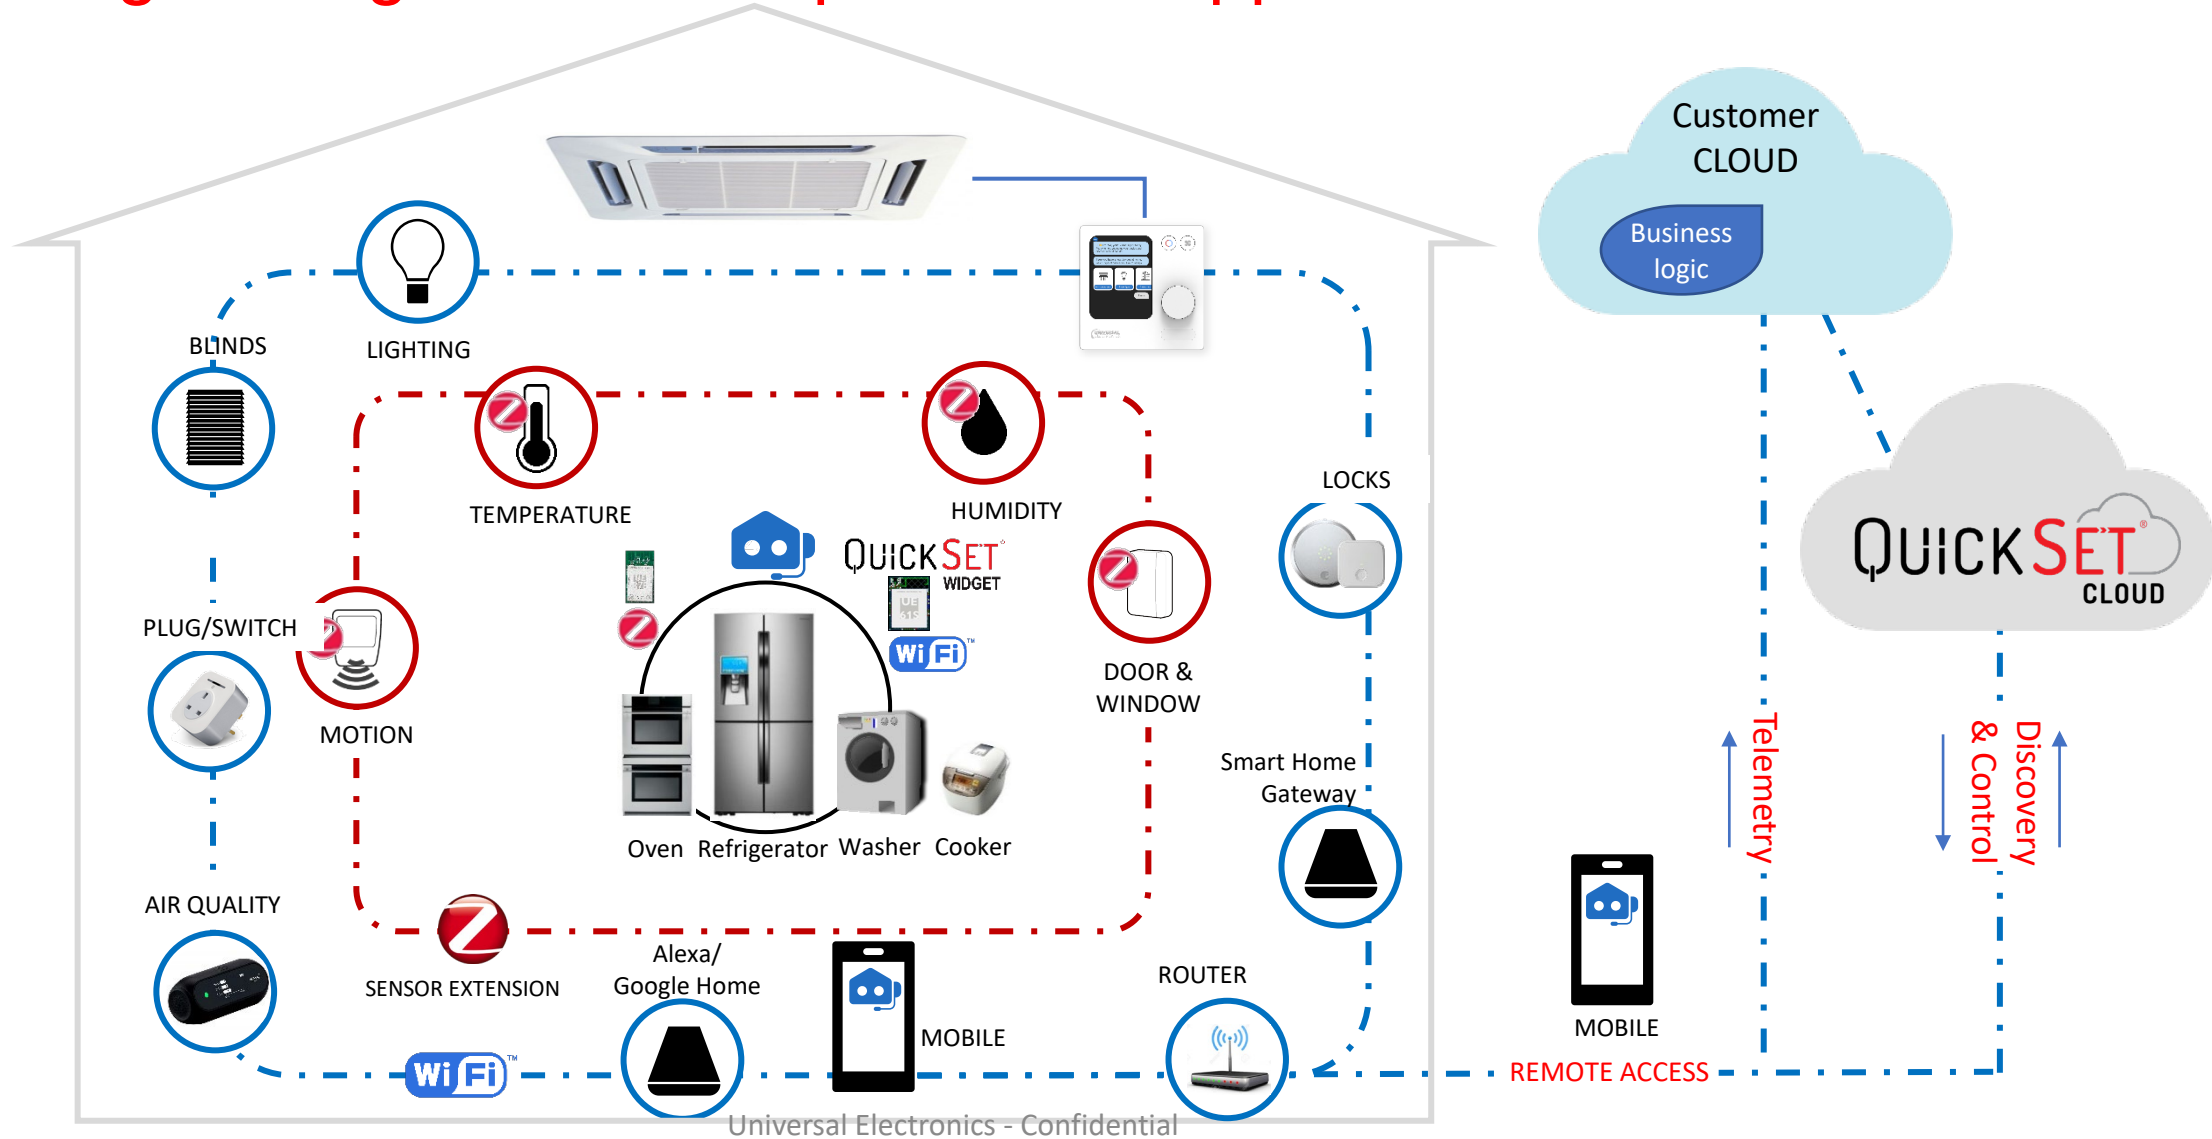

# Enabling Manageable and Updateable Central/Ducted HVAC

# Enabling Manageable and Updateable Split HVAC

# Enabling Manageable and Updateable Appliances

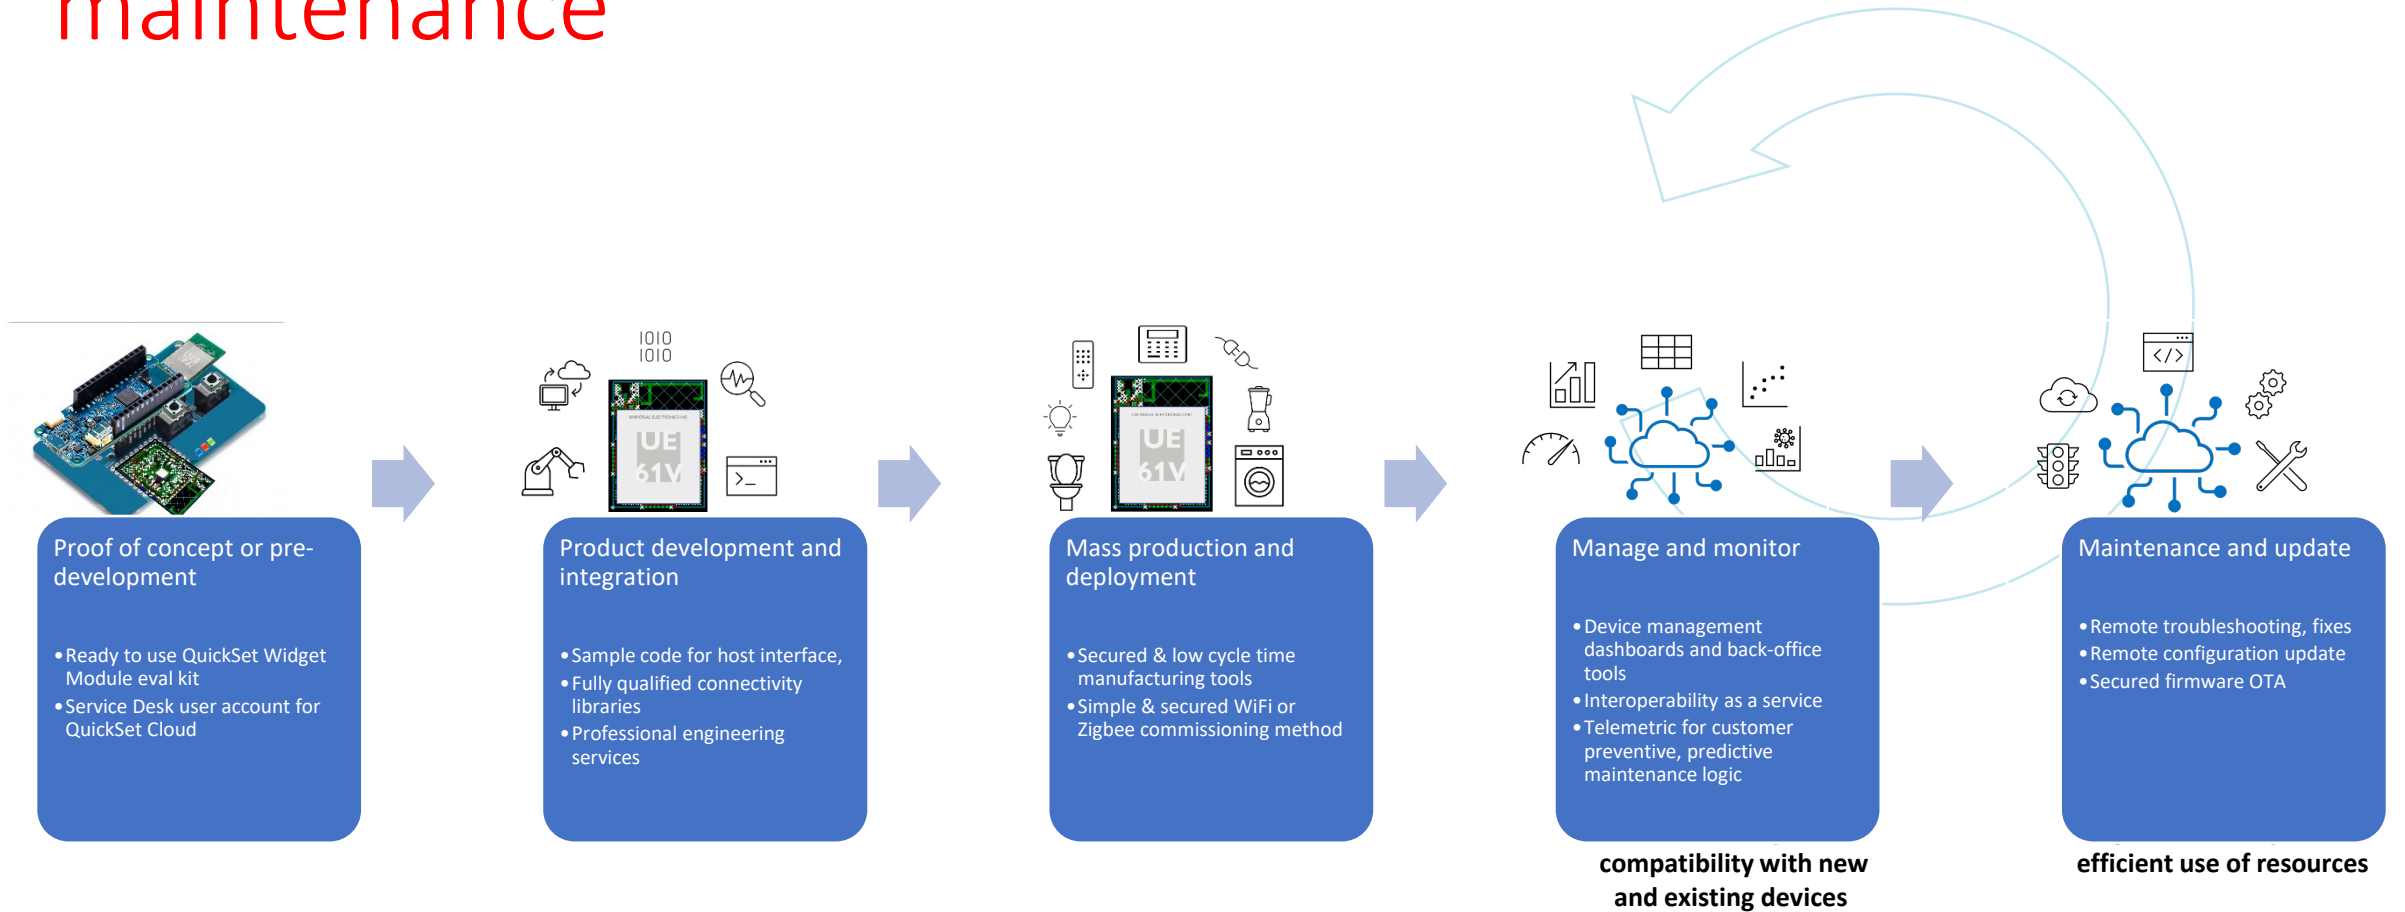

---

# Lifecycle support

# From product creation to lifecycle maintenance

# Ecosystem of Services

## Built-in Services

Services core to the functionality of QuickSet Widget which are built in and supported through QuickSet Cloud and Virtual Agent

Including

- Interoperability as a Service
- Device management including OTA
- Device discovery and fingerprinting
- Device control

## Enterprise Integration Services

Integration with existing services, offered as professional services. These integrate with existing enterprise infrastructure and allow our customers to remain in control of their own customers.

Including

- Preventive maintenance
- OEM specific HVAC logic

## Partner Services

Partnerships with top vendors to enable curated set of monetization opportunities for our customers.

Examples

- Onsite repair service

# QUICKSET<sup>®</sup> WIDGET

*QuickSet Widget together with QuickSet Cloud offered as an end-to-end IoT connectivity platform optimized for interoperability, lifecycle management applications to accelerate introduction of new services.*
